

BRIAN OGERO

Software Engineer | Cybersecurity Researcher | AI Engineer

Nakuru, Kenya • +254 759 776 864 • brianogero@kabarak.ac.ke • ogero.dev • github.com/Ogero79 • linkedin.com/in/brian-ogeroo

PROFESSIONAL SUMMARY

Security-focused software engineer and final-year Computer Security & Forensics student building and hardening full-stack applications end-to-end. Designs and ships production systems in React, Next.js, Node.js, FastAPI, and PostgreSQL, with hands-on depth in authentication security, anomaly detection, and secure system design — demonstrated through independently built projects including an ML-driven session-hijacking detector and a cyber threat intelligence platform. Oracle AI Foundations certified, applying AI/ML techniques (scikit-learn, behavioral analytics) to real security problems. Experienced in government ICT environments and freelance client delivery. Motivated to apply secure engineering practice and data-driven thinking to evidence-based, high-impact technology work.

EDUCATION

B.Sc. Computer Security & Forensics Sept 2022 – Dec 2026 (Expected)

Kabarak University, Nakuru, Kenya | Full-Time, On-Campus

Relevant Coursework: Network Security, Computer Forensics, Database Management Systems, Systems Analysis & Design, Operating Systems, Data Structures & Algorithms

CERTIFICATIONS

- Oracle AI Foundations Certified Associate — Oracle Corporation. Covers machine learning fundamentals, natural language processing, computer vision, and responsible AI principles.

TECHNICAL SKILLS

Languages: Python, JavaScript, TypeScript, SQL

Frameworks & Libraries: React, Next.js, Node.js, Express, FastAPI, Prisma

Databases: PostgreSQL (design, querying, optimization)

Security: Authentication & Session Security, Secure SDLC, OWASP Top 10 awareness, Network Security, Digital Forensics, Zero Trust Architecture principles, Behavioral Anomaly Detection

AI & Data: scikit-learn (IsolationForest), Pandas, NumPy, REST API integration, ML-driven risk scoring

Cloud & DevOps & Tools: Docker, Docker Compose, Git/GitHub, Linux (Ubuntu), CI-friendly monorepo tooling (pnpm workspaces)

PROFESSIONAL EXPERIENCE

Freelance Software Developer | Self-Employed Jan 2024 – Present

Nakuru, Kenya | ogero.dev

- Built and deployed 4+ production web applications and platforms — spanning nonprofit, education, and security tooling — using React, Next.js, Node.js, and PostgreSQL, independently owning requirements gathering through deployment and client handover.
- Designed and shipped a production marketing website for an international nonprofit (Our Bloom Nation) with a multi-page Next.js architecture, event and community-signup integrations, and a media gallery, currently showcasing 500+ people reached and 10+ hosted events across 15+ communities.
- Developed Python automation workflows that reduced manual data-processing effort by a significant margin for freelance clients.
- Integrated third-party REST APIs to build real-time data dashboards and reporting interfaces.
- Delivered pixel-perfect, responsive UI implementations from Figma designs with verified cross-browser compatibility.

IT Attachment Intern | Kisumu County Government Aug 2025 – Dec 2025

Supervisor: Ronald Mukele, Information Technology Officer | Internship period completed

- Supported management and maintenance of mission-critical internal software systems serving 500+ county staff, maintaining minimal downtime and consistent service delivery.
- Diagnosed and resolved complex network connectivity and configuration issues, improving departmental network reliability and cutting incident response times.

- Assisted in planning and executing software deployments and system upgrades, contributing to a more secure and up-to-date IT environment.
- Documented technical processes and procedures with the IT team, supporting institutional knowledge management.
- Gained hands-on exposure to government data infrastructure, data governance practices, and public-sector ICT protocols.

NOTABLE PROJECTS

SessionGuard — *AI-driven continuous identity protection for detecting session hijacking in real time*

- **Stack:** Next.js, TypeScript, Express, Prisma, PostgreSQL, Python FastAPI, scikit-learn
- **Built:** A full monorepo system: a browser-side behavioral SDK capturing keystroke, mouse, and navigation telemetry; a statistical baseline engine; an IsolationForest anomaly-detection ML service; and an adaptive policy engine issuing step-up authentication challenges or session revocation.
- **Impact:** Built a working experimentation lab that computes true/false positive and negative rates and detection latency across simulated attack trials — directly validating the detection approach with measurable accuracy data.

github.com/Ogero79/sessionguard

ThreatScope — *Cyber threat monitoring and analysis platform*

- **Stack:** TypeScript, Node.js, Python, Docker
- **Built:** A security analytics platform for identifying suspicious activity patterns and surfacing actionable threat intelligence in real time.
- **Impact:** Containerized full-stack deployment (Docker Compose) enabling reproducible setup for threat-monitoring analysis.

github.com/Ogero79/threatscope

Our Bloom Nation — *Production website for an international nonprofit*

- **Stack:** Next.js, React, responsive/mobile-first design
- **Built:** End-to-end design, development, and deployment for a faith-based nonprofit, including a multi-page site (About, Impact, Events, Gallery, Community), embedded community/newsletter sign-up forms, and an image gallery.
- **Impact:** Live production site currently reporting 500+ women reached, 10+ events hosted, and 15+ communities served.

ourbloomnation.org

EduHub Backend — *REST API for an educational management platform*

- **Stack:** Node.js, JavaScript, Express, email-service integration
- **Built:** Backend service handling user data, core business logic, and API endpoints for student-facing and admin features, including automated email notifications.
- **Impact:** Iterated over 49 commits, reflecting sustained backend development and refinement of the API surface.

LEADERSHIP & COMMUNITY ENGAGEMENT

- Microsoft Learn Student Ambassador (MLSA)
- Google Developer Student Clubs (GDSC) Member — Kabarak University
- Climb4Dreams Fellowship — mentorship and youth empowerment initiative
- Inspire Spaces Community — collaborative learning and professional development community

ADDITIONAL INFORMATION

- GitHub (github.com/Ogero79): public repositories for SessionGuard, ThreatScope, and EduHub Backend, including full documentation and architecture notes.
- Portfolio: ogero.dev — live demos and project write-ups.
- References available on request.
